

Dear colleague,

There will be a short CAP outage on Wednesday 3rd July 09:00-10:00.

Following the outage several updates will be made live:

- Alongside your name in CAP you will now see the organisation details you are registered for
- The CAP homepage should now more readily display news and information
- The 'no cancer treatment' question in the Tumour record will now only accept one answer (before it was multi-select)
- In the reports section you will now be able to create an extract report for the 'non-primary record'
- Help text and warning text has been improved for 'tumour height above anal verge'
- Help text has been improved for 'non cancer treatment' in tumour record
- **Mismatch Repair has moved from the Pathology record to the Tumour Record – this will require any CSV extract system to be updated**
- Validation has been updated for 'No Cancer Treatment Reason'
- The file submission dashboard has been improved to more clearly show when and why uploads have failed

The updated dataset will be published on the audit webpage at the next opportunity.

Kind regards
The NBOCA Team
